## Acknowledgements

Transport for NSW wishes to thank the following -

- NSW Police Force for supply of road crash data.
- Spinal Cord Injuries Australia for providing coding and data entry service.
- NSW Ministry of Health for providing access to information in the NSW Admitted Patient Data Collection, NSW Emergency Department Data Collection and the NSW Registry of Births, Deaths and Marriages - Death registrations.
- Centre for Health Record Linkage for conducting the record linkage.
- Aboriginal Health \& Medical Research Council for supporting the ongoing data linkage project.
- Independent Hospital Pricing Authority for providing the International Classification of Diseases, 10th Revision, Australian Modification (ICD-10-AM) electronic code lists.
- The State Insurance Regulatory Authority (SIRA) for providing data on Compulsory Third Party insurance and Workers Compensation claims.
- The Lifetime Care and Support Authority for data on Lifetime Care participants.
- ACT Health Directorate for providing access to information in the ACT Admitted Patient Care and ACT Emergency Department Information System data collections.
- The Cause of Death Unit Record File (COD URF) provided by the Australian Coordinating Registry for the COD URF on behalf of the NSW Registry of Births, Deaths and Marriages, NSW Coroner and the National Coronial Information System.
- The Ambulance Service of NSW for providing data from the Computer-Aided Dispatch, electronic Medical Record and Patient Health Care Record systems.
- Forensic and Analytical Science Service, NSW Health for providing alcohol and drug test results.
- Department of Justice \& Regulation for and on behalf of the State of Victoria, for access to the National Coronial Information System for the verification of fatality information.
- NSW Institute of Trauma and Injury Management for access to information on injury outcomes for road crash related casualties that are considered seriously injured by Health.

This reporting of serious injury information forms part of the routine monitoring activity undertaken by Transport for NSW to improve road safety for the community. It was approved by the following ethics committees -

- Approved by the NSW Population \& Health Services Research Ethics Committee on 19th December 2013.
- Approved by the Aboriginal Health \& Medical Research Council Ethics Committee on 24th January 2014.
- Approved by the ACT Health Human Research Ethics Committee on 13th November 2013.
- Approved by the Calvary Public Hospital Bruce Human Research Ethics Committee on 20th September 2017.

## Preface

## Scope of crash statistics

This is the fifth Statistical Statement to report on the severity of injuries from road traffic crashes as identified from hospital records.

## Crash statistics included in this Statistical Statement

The crash statistics included in this Statistical Statement are confined to those crashes which conform to the national guidelines for reporting and classifying road vehicle crashes and are based on the following criteria:

## 1 The crash was reported to the police

2 The crash occurred on a road open to the public
3 The crash involved at least one moving road vehicle
4 The crash involved at least one person being killed or injured.
Reports for some crashes are not received until well into the following year and after the annual crash database has been finalised. These amount to less than $1 \%$ of recorded crashes and are counted in the following year's statistics.
Crash data reported in this Statistical Statement were finalised and released in October 2020.

## Casualty statistics included in this Statistical Statement

Fatality and injury statistics included in this Statistical Statement are identified from the police report of the crash as well as from hospital admission and emergency department records from NSW hospitals. All injuries reported in Tables 5 to 36, Figure 2 and Figures 3a to 3c are related to a crash conforming to the above criteria. Serious injuries reported in Tables 1 to 4 and Figure 1 include those identified in a police report of a crash as well as those identified from hospital records but not matched to a police report. The health data linkage process is explained further in a following section.

## Criteria for reporting crashes in 2019

Prior to 2000, Section 8 (3) of the Traffic Act 1909 required a road crash in New South Wales to be reported to the police when any person was killed or injured or property damage over $\$ 500$ was sustained.
On 1 December 1999, the Traffic Act was repealed and replaced by new traffic legislation including the adoption of the Australian Road Rules. The new traffic legislation is found in the Road Transport (General) Act 1999 and the Road Transport (Safety and Traffic Management) Act 1999 and the regulations made under those Acts.

Rule 287 (3) of the Road Rules requires a crash to be reported to police when any person is killed or injured; when drivers involved in the crash do not exchange particulars; or when a vehicle involved in the crash is towed away.
As of 15 October 2014 NSW Police are not required to attend or investigate crashes in which a vehicle is towed away but no-one is injured or killed. These crashes are now required to be self-reported by involved parties to Police via the Police Assistance Line (PAL). If medical attention for an injury is sought more than 24 hours after a crash, this may also be reported via PAL as an injury crash.

## How crash data are processed

The processing of crash data in New South Wales directly involves three organisations: the NSW Police Force, Spinal Cord Injuries Australia (SCIA) and Transport for NSW. Within Transport for NSW, the Centre for Road Safety (CRS) is the office responsible for the collation and dissemination of road crash data.

As of July 1997 information related to a road crash is entered directly into COPS (Computerised Operational Policing System) by a police officer, using details collected by them from the scene and witness accounts, or a Police Assistance Line (PAL) operator from details provided by the person reporting the crash. A sketch or site diagram of the crash site is completed for casualty crashes where a police officer attended the crash scene.

Completed and verified data for all crashes are transferred from COPS, on a weekly basis, and electronically forwarded to the CRS. The crash information and site diagrams are electronically available to SCIA, a business enterprise employing physically disabled people, contracted to the CRS to provide a coding and data entry service. Using the CrashLink Data Capture System, accurate location information is determined for each crash from the collision summary/narrative describing the crash and each data item is interpreted, validated and coded into consistent values. While less information is captured by PAL for self-reported crashes, these crashes are still coded in the same manner with capture of most data fields possible from the available information.
A computer checking process is performed to identify inconsistencies and errors which may have occurred during the data entry and validation phases. In addition, results of blood alcohol analyses and drug tests are regularly obtained from the NSW Health Pathology Forensic and Analytical Science Services. A further checking process is undertaken each quarter to identify and correct any anomalies in the data prior to completion.
In the case of a fatal crash, police officers send a preliminary report, generated from COPS, to the CRS. This provides initial information which is used to compile a preliminary database of fatal crashes. Hence, it is possible to monitor and analyse fatal crashes on a daily basis. A site diagram of the crash scene is usually supplied later, which enables location and crash details to be confirmed and updated if required. Final fatal crash data are captured upon receipt of the data regularly received electronically from the NSW Police Force.

The crash data are further enhanced with injury severities determined by the health data linkage process outlined below.

The CRS crash reporting database, known as CrashLink, is used extensively within Transport for NSW for monitoring and research work, strategic planning and the production of routine reports and analyses. Members of the public and organisations such as the Federal Department of Infrastructure, Regional Development and Cities, NSW Police Force, National Roads and Motorist's Association, Australian Bureau of Statistics and local governments also regularly use road crash information.

## Health data linkage process

The inclusion of serious injury information into this Statistical Statement is possible due to the linkage of casualty records from crash reports with hospital records from NSW hospitals in a way which protects the privacy of those involved.

CRS has implemented a routine quarterly linkage (including historic data from 2005) which includes the following data collections -

1. NSW Ministry of Health data collections -
a. NSW Admitted Patient Data Collection - This collection records all admitted patient services provided by New South Wales Public Hospitals, Public Psychiatric Hospitals, Public MultiPurpose Services, Private Hospitals, and Private Day Procedures Centres.
b. NSW Emergency Department Data Collection - This collection provides information about patient presentations to the emergency departments of public hospitals in NSW.
c. NSW Mortality Data Collection from the NSW Register of Births, Deaths and Marriages - This collection contains mortality information for deaths occurring in NSW.
d. Cause of Death Unit Record File (COD URF) from the Australian Co-ordinating Registry is updated on an ad-hoc annual basis.
2. State Insurance Regulatory Authority data collections -
a. These collections provide information about Compulsory Third Party and workers compensation claimants injured in motor vehicle accidents in NSW.
3. Lifetime Care and Support Agency
a. This collection provides information about Lifetime Care participants severely injured on NSW roads.
4. CRS CrashLink crash reporting database.
5. NSW Ambulance data collections -
a. Computer-Aided Dispatch (CAD)
b. electronic Medical Record (eMR)
c. Patient Health Care Record (PHCR).
6. NSW Institute of Trauma and Injury Management data collection
a. This collection provides information on injury outcomes for road crash related casualties that are considered seriously injured by Health.

The record linkage is conducted in two parts. Firstly, the linkage of person records between the data collections is conducted by the Centre for Health Record Linkage (CHeReL). In bringing together these records, the CHeReL uses strict privacy preserving protocols which ensure the security of the data and confidentiality of the individuals and their related records. Only de-identified records are returned to the Centre for Road Safety.

This process includes -

1. Custodians of the data collections to be linked provide the CHeReL with an encrypted source record number and demographic details for each record in their dataset. Note that clinical data is not provided to the CHeReL.
2. The CHeReL links these records using probabilistic matching of the demographic details, and assigns a project person number for records that belong to the same person. The CHeReL person ID and the associated source record numbers form the CHeReL Master Linkage Key (MLK). The MLK provides a 'pointer' to records for a person in different datasets. The CHeReL sends each data custodian a list of Project specific Person Numbers (PPN) and the associated encrypted source record numbers for their database.

During the next stage, the records from the different data collections and crash data are linked. The respective data custodians provide input files which include PPNs and approved variables. The CRS project team load the files into a database and link all records from different datasets for a person using the PPN. Approved CRS researchers will only receive datasets where personal identifiers have been removed for analysis.

This process ensures that:

- CHeReL staff performing the linkage use demographic variables but do not have access to the clinical information about the individuals;
- Data custodians only have access to data within their data collections; and
- Researchers receive data which contains no identifying variables, or variables which provide a link back to the CHeReL MLK.

The future inclusion of data from other health data collections could potentially impact numbers presented in this Statistical Statement.

## Special notes

## Changed injury severity information from 2005

During 2020, data from a further two heath data collections were linked to CRS crash records as part of the Health Data Linkage program. Whilst the number of crashes reported did not change, the addition resulted in minor changes to the injury severity of a small proportion of CrashLink records between 2005 and 2018.

In mid-2017, NSW Health changed their policy on the reporting of hospital admissions by removing hospital admissions that were not admitted to the ward from the admissions data from 2018 onwards. NSW Health
subsequently republished their admission data to exclude all Emergency Department (ED) only admissions prior to 2018 to maintain consistency of trends. In order to maintain consistency of trends, CRS decided, as a result of these changes, to amend the linked crash data to align with the practices adopted by NSW Health resulting in a decrease in serious injury numbers from previously reported data.

In 2015, the first linkage of historical crash records with hospital records resulted in the identification of hospital admissions for persons previously identified by Police as uninjured drivers or riders. This extra information was used to enhance crash data from 2005 by including the additional injured people as casualties. This also has the effect of changing some towaway crashes to injury crashes. This resulted, a small increase in casualties per year for the years 2005 - 2014 as compared to previous reporting.

The total number of crashes reported each year has not been impacted by any of the above changes. . However, crash and casualty data reported prior to 2020 will no longer align with statistics reported in this statistical statement.

Tables 5 and 9 in this Statistical Statement include these updated data from 2005. Care must be taken when assessing trends over time from years prior to 2005 or from previously published statistical statements.
Serious injury data presented for 2005 are based on the date the crash occurred and differs from subsequent years which are based on when the crash was recorded. As such, total hospitalisations for 2005, as reported in Tables 1 to 4, are under-reported by approximately one per cent.

## Pedal cycle crashes

In 2017 power assisted pedal cycles previously categorised as motorcycles were re-defined as pedal cycles. Riders of power assisted pedal cycles are now pedal cycle riders. This resulted in less than five casualties categorised as pedal cycle riders which would have been motorcycle riders in previous years.
It is recognised that a substantial proportion of non-fatal pedal cycle crashes are not reported to police. As the NSW Police Force is the only source of crash notification used in this statement, statistics relating to pedal cycle crashes may not accurately reflect the situation. A serious injury of a pedal cyclist however may be identified from hospital records alone and will be included in the serious injury section of the Statistical Statement.

## Other historical data changes

Due to changes over time in the COPS and CrashLink systems, there may be inconsistencies in the reporting of some data fields.

The introduction of the Graduated Licensing System in 2000 resulted in an increase in the number of Provisional Licence holders.

In 2010 an improvement was made to the identification of contributing factors. This improvement is reflected mainly in Tables 13 and 17. In 2014 a system change made it possible for more than one factor to be captured for each vehicle. Table 17 now counts all contributing factors so slight increases in the number of crashes with factors recorded are expected.
The introduction of self-reporting for crashes has impacted trends in the crash data from October 2014. Crash records collected directly from involved parties contain less descriptive data making the determination of attributes such as road user movements and contributing factors less reliable or unavailable for these crashes. The factor of fatigue in particular, is not set for these crashes. Self-reported crashes make up 25 per cent of injury crashes in 2019.

Statistics on tow-away only crashes are no longer included in this Statistical Statement however are available in other forms on the Centre for Road Safety website.

## Zero alcohol limit

The Road Transport (Safety and Traffic Management) Act 1999, prescribes a zero alcohol limit in NSW for novice licence holders commencing 3 May 2004. The zero alcohol limit means learner, provisional P1 and provisional P2 licence holders may not consume any alcohol before driving. Relevant tables in this statement incorporate the zero alcohol limit (novice range prescribed concentration of alcohol (PCA) and special range PCA offences).

## Speed criteria change

Commencing 1 January 2010 the criteria for determining whether a crash can be considered to have involved speeding was improved to assess whether or not the vehicle was travelling in excess of that permitted, based on licence class or vehicle weight. Refer to Speeding on page 11.

## Criteria for determining speeding and fatigue involvement

## Speeding

The identification of speeding (excessive speed for the prevailing conditions) as a contributing factor in road crashes cannot always be determined directly from police reports of those crashes. Certain circumstances, however, suggest the involvement of speeding. The Centre for Road Safety has therefore drawn up criteria for determining whether or not a crash is to be considered as having involved speeding as a contributing factor.

Speeding is considered to have been a contributing factor to a road crash if that crash involved at least one speeding motor vehicle.
A motor vehicle is assessed as having been speeding if it satisfies the conditions described below under (a) or (b) or both.
(a) The vehicle was described by police as travelling at excessive speed; or the stated speed of the vehicle was in excess of that permitted for the vehicle controller's licence class or the vehicle weight (introduced 1 January 2010); or the stated speed of the vehicle was in excess of the speed limit.
(b) The vehicle was performing a manoeuvre characteristic of excessive speed, that is: while on a curve the vehicle jack-knifed, skidded, slid or the controller lost control; or
the vehicle ran off the road while negotiating a bend or turning a corner and the controller was not distracted by something or disadvantaged by drowsiness or sudden illness and was not swerving to avoid another vehicle, animal or object and the vehicle did not suffer equipment failure.

## Fatigue

The identification of fatigue as a contributing factor in road crashes similarly cannot always be determined directly from police reports of those crashes and the following criteria are used to assess its involvement. Fatigue is considered to have been involved as a contributing factor to a road crash if that crash involved at least one fatigued motor vehicle controller.
A motor vehicle controller is assessed as having been fatigued if the conditions described under (c) or (d) are satisfied together or separately.
(c) The vehicle's controller was described by police as being asleep, drowsy or fatigued.
(d) The vehicle performed a manoeuvre which suggested loss of concentration of the controller due to fatigue, that is:
the vehicle travelled onto the incorrect side of a straight road and was involved in a head-on collision (and was not overtaking another vehicle and no other relevant factor was identified); or
the vehicle ran off a straight road or off the road to the outside of a curve and the vehicle was not directly identified as travelling at excessive speed and there was no other relevant factor identified for the manoeuvre.

The limitations on the amount of information that can be determined for crashes self-reported by involved parties to Police via the Police Assistance Line has meant that fatigue cannot be reliably determined for these crashes. Therefore, from 2015, these crashes are not subject to the above assessment for fatigue involvement.

## Definitions and explanatory notes

## Animal rider

Motorcycle passenger

Motorcycle rider
Newcastle Metropolitan Area

| Passenger | Any person, other than the controller, who is in, on, boarding, entering, alighting or falling from a road vehicle at the time of the crash, provided a portion of the person is in/on the road vehicle. |
| :---: | :---: |
| Pedal cycle | Any two or three-wheeled device operated solely by pedals and propelled by human powe except toy vehicles or other pedestrian conveyances. Includes bicycles with side-car, traile or training wheels attached and power assisted pedal cycles. |
| Pedal cycle passenger | A person on but not controlling a pedal cycle. |
| Pedal cycle ri | A person occupying the controlling position of a pedal cycle. |
| Pedestrian | Any person who is not in, on, boarding, entering, alighting or falling from a road vehicle at the time of the crash. |
| Pedestrian conveyance | Any device, ordinarily operated on the footpath, by which a pedestrian may move, or by which a pedestrian may move another pedestrian or goods. Includes non-motorised scooter, pedal car, skateboard, roller skates, in-line skates, toy tricycle, unicycle, push cart, sled, trolley, non-motorised go-cart, billycart, pram, wheelbarrow, handbarrow, nonmotorised wheelchair or any other toy device used as a means of mobility. |
| Road | The area devoted to public travel within a surveyed road reserve. Includes a footpath and cycle path inside the road reserve and a median strip or traffic island. |
| Road vehicle | Any device (except pedestrian conveyance) upon which or by which any person or property may be transported or drawn on a road. |
| Seriously injured (matched) | A person identified in a police report and matched to a health record indicating a hospital stay that is not an ED-only admission due to injuries sustained in a crash, or is identified as a Lifetime Care participant. |
| Seriously injured (unmatched) | A person not matched to a police report but identified from health records as having a hospital stay that is not an ED-only admission due to an injury on a public road. |
| Seriously injured (all hospitalisations) | A total of matched and unmatched seriously injured. S) |
| Serious injury crash | A non-fatal crash in which at least one person is seriously injured. |
| Sydney <br> Metropolitan Area | Comprised of the following local government areas: Sydney, Bayside, Blacktown, Burwood, Camden, Campbelltown, Canada Bay, Canterbury-Bankstown, Cumberland, Fairfield, Georges River, Hornsby, Hunters Hill, Inner West, Ku-ring-gai, Lane Cove, Liverpool, Mosman, North Sydney, Northern Beaches, Parramatta, Penrith, Randwick, Ryde, Strathfield, Sutherland, The Hills, Waverley, Willoughby and Woollahra. |
| Wollongong Metropolitan Area | Comprised of the following local government areas: Wollongong and Shellharbour. |

## Interpreting tables correctly

## It is essential to understand which particular data items are being counted in a table in order to avoid mistakes in interpreting them.

## Convention for table headings

The first word(s) in the title of a table indicates the data items being counted. For example, Table 9 gives counts of casualties, Table 17 gives counts of crashes and Table 34 gives counts of motor vehicle controller casualties. Remaining words in the table titles indicate the classification variables.

## EXAMPLE 1

Suppose you wish to know the number of car drivers aged 17-20 years who were killed. If you looked at Table 21a, saw the word fatal in the heading and assumed that the table was counting persons killed, you would deduce that 15 car drivers aged 17-20 were killed. That is not the correct answer. Table 21a is counting motor vehicle controllers involved in fatal crashes regardless of whether those controllers were themselves killed.

To determine the number of car drivers aged 17-20 who were killed you would need to use Table 32a. This table is counting casualties and the degree of casualty is the category killed. The correct answer to the above question, as indicated in this table, is 6.

## EXAMPLE 2

Suppose you wish to know how many serious injury crashes involved at least one motorcycle. If you looked at Table 16, and did not note that the table is counting motor vehicles involved in crashes, you might be tempted to assume that the answer to your question was 1,040 . That is not the correct answer.

There can be more than one motorcycle involved in a particular crash so to answer this question you need to look at a table which is counting crashes, not motor vehicles involved in crashes.
The correct answer of 1,016 is to be found from Table 15a, which is counting crashes for particular crash types.

## EXAMPLE 3

Don't make assumptions about the nature of persons killed or injured that are not justified by the information presented. Table 15b tells us the numbers of casualties from different types of crashes but does not imply anything about the road user classes of those casualties.

For example, when considering casualties from pedal cycle crashes you cannot assume that all casualties were pedal cycle riders or pedal cycle passengers. Some may be pedestrians or even truck drivers. A little lateral thinking is necessary to understand all the implications.

## Serious Injuries (All Hospitalisations)

- Summary data for 2019
- Main points for 2019
- $\quad 2019$ serious injuries (all hospitalisations) and rates
- Serious injury (all hospitalisations) trends

## Summary data for 2019

|  | Number | Percentage | Compared with 2018 |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | Number change | Percentage change |
| SERIOUS INJURIES |  |  |  |  |
| Serious injuries (matched) | 4,606 | 41.6 | -728 | -13.6 |
| Serious injuries (unmatched) | 6,479 | 58.4 | 463 | 7.7 |
| Serious injuries (all hospitalisations) | 11,085 | 100.0 | -265 | -2.3 |
| VEHICLES ON REGISTER ${ }^{1}$ | 5,642,400 |  | 70,500 | 1.3 |
| Serious injuries (all hospitalisations) per 10,000 vehicles | 19.65 |  |  | -3.6 |
| LICENCE HOLDERS ${ }^{2}$ | 5,606,200 |  | 77,000 | 1.4 |
| Serious injuries (all hospitalisations) per 10,000 licence holders | 19.77 |  |  | -3.7 |
| POPULATION OF STATE ${ }^{3}$ | 8,086,800 |  | 106,700 | 1.3 |
| Serious injuries (all hospitalisations) per 100,000 persons | 137.07 |  |  | -3.6 |

[^0]
## Main points for 2019

■ IMPORTANT NOTE - The 2019 Statistical Statement reflects changes to the historical hospitalisation statistics subsequent to the inclusion of two new health data collections to the Health Data Linkage program. The historical data have been slightly revised in light of the changed procedure (see Health data linkage process (p8) and Special notes (p9)).

■ There were 11,085 persons hospitalised from road traffic crashes in 2019, as derived from the data linkage with NSW Health Department admission data. This was 265 fewer hospitalisations ( 2 per cent) than the previous year and the lowest annual total since 2016.

■ The rate of persons hospitalised per 100,000 population was 137.1 in 2019, down from 142.2 the previous year. This was the lowest rate since 2012.

■ The estimated cost to the community of all road casualties in NSW for 2019 using the Inclusive Willingness to Pay methodology was around $\$ 9.0$ billion - hospitalisations accounted for more than half ( 60 per cent) of this total with $\$ 5.4$ billion.

■ Compared with 2018, drivers, passengers and pedal cyclists were the road user groups to have experienced decreases in hospitalisations in 2019.

■ There were 3,578 hospitalisations of drivers in 2019, down 154 (4 per cent) on the previous year. Of all road user groups, drivers accounted for the largest proportion of hospitalisations (32 per cent).

■ Motorcyclists continue to be the second largest road user group for hospitalisations in 2019, up by 135 ( 5 per cent) on the previous year and the highest motorcyclist total since these data were first recorded in 2005. Motorcyclists accounted for 24 per cent of all hospitalisations in 2019.

■ Passenger hospitalisations decreased in 2019, down by 26 (2 per cent) and the lowest passenger total since 2012. Passengers accounted for 12 per cent of all hospitalisations in 2019.

■ In contrast to the fatality statistics, pedal cyclists remain as the third largest road user group for hospitalisations in 2019, down by 127 (6 per cent) on the previous year. One in six (17 per cent) of all hospitalisations in 2019 were pedal cyclists.

■ Compared with 2018, age groups between 5 and 20 years, 26 and 59 years and 70 and 79 years experienced decreases in hospitalisations in 2019 with the largest decrease amongst 50 to 59 year olds, down by 108 (7 per cent).

■ Nineteen per cent of all hospitalisations were aged 17 to 25 years, but this age group represented only 12 per cent of the NSW population.

■ Children aged less than 17 years continued to experience reductions in hospitalisations in 2019 , down 6 (1 per cent) compared with 2018 and the lowest under 17 years total since these data were tabulated in 2005. Since 2005, hospitalisations of children aged under 17 years have decreased by 41 per cent.

■ In contrast, hospitalisations of persons aged 80 years or more increased again in 2019, up 14 (2 per cent) compared with 2018 and the highest total for this age group since these data were tabulated in 2005. Since 2005, hospitalisations of persons aged 80 years or more have increased by 89 per cent.

- Almost two-thirds (65 per cent) of all hospitalisations were males, but they represented only 50 per cent of the NSW population.

■ Of the 11,085 hospitalisations in 2019, less than half (42 per cent) were matched to a Police crash report.

Figure 1: Serious injury (all hospitalisations) rate per 10,000 vehicles, 10,000 licence holders and 100,000 population for years 2005 to 2019 in NSW

Note: Serious injury (all hospitalisations) rate is expressed as the number of persons seriously injured in road crashes per 10,000 vehicles on register, per 10,000 licence holders and per 100,000 population.

Table 1: Serious injuries (all hospitalisations), year, road user class

|  | Road User Class |  |  |  |  |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| Year | Driver | Passenger | Motorcyclist | Pedestrian | Pedal cyclist | Other | Total |
| $\mathbf{2 0 0 5}$ | 2,613 | 1,380 | 1,852 | 980 | 1,345 | 699 | 8,869 |

## Summary data for 2019

|  | Number | Percentage | Compared with 2018 |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | Number change | Percentage change |
| CRASHES |  |  |  |  |
| Fatal crashes | 329 | 2.4 | 3 | 0.9 |
| Serious injury crashes | 4,140 | 29.7 | -627 | -13.2 |
| Moderate injury crashes | 5,286 | 38.0 | -696 | -11.6 |
| Minor/Other injury crashes | 4,164 | 29.9 | 562 | 15.6 |
| Total casualty crashes | 13,919 | 100.0 | -758 | -5.2 |
| CASUALTIES |  |  |  |  |
| Killed | 353 | 2.0 | 6 | 1.7 |
| Seriously injured | 4,606 | 26.2 | -728 | -13.6 |
| Moderately injured | 6,868 | 39.1 | -1,031 | -13.1 |
| Minor/Other injured | 5,721 | 32.6 | 719 | 14.4 |
| Total casualties | 17,548 | 100.0 | -1,034 | -5.6 |
| MOTOR VEHICLES ON REGISTER ${ }^{\mathbf{1}}$ | 5,642,400 |  | 70,500 | 1.3 |
| Fatalities per 10,000 vehicles | 0.63 |  |  | 0.5 |
| LICENCE HOLDERS ${ }^{2}$ | 5,606,200 |  | 77,000 | 1.4 |
| Fatalities per 10,000 licence holders | 0.63 |  |  | 0.3 |
| POPULATION OF STATE ${ }^{3}$ | 8,086,800 |  | 106,700 | 1.3 |
| Fatalities per 100,000 persons | 4.37 |  |  | 0.4 |

[^5]
## Main points for 2019

- The number of persons killed per 100,000 population was 4.37 . This is the third lowest fatality rate since records were first compiled in 1908.
- There were 13,919 casualty road crashes in New South Wales during 2019. Of these, 329 were fatal crashes and 13,590 were injury crashes. There were 353 persons killed and 17,195 injured.
- The estimated cost to the community of these road casualties using the Inclusive Willingness to Pay methodology was around $\$ 9.0$ billion (June 2019 dollar values).
- The number of persons killed was up by six (2 per cent) on the previous year, the second lowest annual fatality total since 2014.
- The number of persons injured in 2019 was down by 1,040 (6 per cent) on the previous year and was the lowest annual injury total since 1956.
- Pedestrians were the only road user group to experience a fatality decrease in 2019 compared with the previous year but this was offset by fatality increases among other road user groups.
- There were 45 pedestrians killed in 2019 (down 35 per cent), the third lowest pedestrian fatality total since records began in 1928, but the number of motorcyclists killed increased to 68 (up 26 per cent), the highest motorcyclist total since 2013 and the number of pedal cyclists killed increased to 14 (up 56 per cent), the equal highest pedal cyclist total since 2004.
- Motorcyclists, pedestrians and pedal cyclists were the only road user groups to experience injury increases in 2019 compared with the previous year.
- Country roads accounted for 37 per cent of all casualty crashes, but 67 per cent of fatal crashes.
- At least 13 per cent of motor vehicle occupants killed were not wearing available seat belts.

■ Two of the 14 pedal cyclists killed and at least 10 per cent of those injured failed to wear a helmet.

- Almost two-thirds (64 per cent) of the pedestrians killed were aged 60 or more, although this age group accounted for only 22 per cent of the population.
- Amongst those crashes in which the alcohol involvement was known, alcohol was a contributing factor in 56 per cent of fatal crashes on Thursday, Friday and Saturday nights, 19 per cent of all fatal crashes and 10 per cent of injury crashes.
- At least 5 per cent of all motor vehicle drivers and motorcycle riders who were killed or injured had an illegal blood alcohol concentration. Forty-six per cent of these casualties were in the high range ( $0.15 \mathrm{~g} / 100 \mathrm{~mL}$ or more).
- Crashes which involved speeding represented at least 39 per cent of fatal crashes and 17 per cent of all casualty crashes.
- Fatigue was assessed as being involved in at least 17 per cent of fatal crashes and 8 per cent of all casualty crashes.
- The number of fatalities in May (20 fatalities) was the lowest May total since monthly records began in 1936.
- Twenty-five (19 per cent) of the 129 local government areas in NSW were fatality free in 2019. These 25 local government areas accounted for 6 per cent of the NSW population and included Ku-ring-gai (population 127,200), Woollahra $(59,400)$, Burwood $(40,600)$, Mosman $(31,000)$, Griffith $(27,000)$ and Broken Hill $(17,500)$.
■ Compared with 2018 there was a two per cent increase in fatalities in 2019. There were several crash characteristics which increased by more than the overall decrease. In particular, motorcyclist fatalities increased by 26 per cent, fatalities aged 40 to 49 years increased by 39 per cent, fatal crashes on Tuesdays increased by 40 per cent, fatalities in the Illawarra State Region up by 77 per cent whilst there were increases among drivers aged 60 to 69 years (up by 38 per cent) and motorcycle riders aged 50 to 59 years (up by 80 per cent) involved in fatal crashes.
■ However, compared with 2018, some notable decreases occurred in 2019 - pedestrian fatalities decreased by 35 per cent, fatalities aged 17 to 20 years decreased by 66 per cent, drivers and riders aged 17 to 20 years involved in fatal crashes decreased by 60 per cent, fatalities in the New England (down by 48 per cent) and Murray (down by 40 per cent) Regions and fatal crashes on Mondays (down by 31 per cent) and Fridays (down by 26 per cent).

Table 5: Trends in New South Wales 1950, 1955, 1960, 1965, 1970, 1975, 1980, 1985, 1990, 1995, 2000-2019

| Year | Killed | Injured (d) | Seriously injured (d) | Moderately injured (d) | Minor/Other injured (d) | Total casualties (d) | Fatal crashes | Serious injury crashes (d) | Moderate injury crashes (d) | Minor/Other injury crashes (d) | Total casualty crashes (d) |

p- Preliminary r- revised
s - Revised estimates of motor vehicle travel tor f 1998 onwards based on NSW State of operation figures, estimates prior to 1998 remain based on NSW State of Registration figures.

Figure 2: Fatality rate per 10,000 motor vehicles, 10,000 licence holders and 100,000 population for years 1950 to 2019 in NSW

Note: Fatality rate is expressed as the number of persons killed in road crashes per 10,000 motor vehicles on register, per 10,000 licence holders (licences on issue prior to 1997) and per 100,000 population.

Table 6: Fatality comparison with other Australian States ${ }^{1}$ and other countries ${ }^{2}$
$\left.\begin{array}{lrrrrr}\hline & \text { Killed } & \begin{array}{r}\text { Vehicles } \\ \text { ('000) }\end{array} & \begin{array}{r}\text { Fatalities } \\ \text { Population } \\ \text { ('000) }\end{array} & \begin{array}{r}\text { Fatalities } \\ \text { per } \mathbf{1 0 , 0 0 0} \\ \text { pehicles }\end{array} \\ \text { population }\end{array}\right]$
${ }^{1}$ Australian fatality data (except for New South Wales) for 2019 based on the Bureau of Infrastructure, Transport and Regional Economics: Statistical Report, Road trauma Australia 2019 statistical summary.
${ }^{2}$ Fatality data are for 2019 for other countries and are based on Department for Transport statistics, United Kingdom: RAS52001 International comparisons of road deaths or relevant National Statistical Reporting Authorities, excluding Canada which are data for 2018.
${ }^{3}$ Australian vehicle figures (except for New South Wales) are as at 31 January 2019 and are from the Australian Bureau of Statistics Motor Vehicle Census Australia. These figures may not agree with registration statistics for individual States and Territories. Data for New South Wales are from TfNSW and are as at 30 June 2019. The 2019 vehicle figures for some other countries are sourced from relevant National Statistical Reporting Authorities. The 2018 vehicle figures for other jurisdictions are based on previously published data whilst those for the United States of America are sourced from US Department of Transport, Federal Highway Administration, Highway Statistics 2018.
${ }^{4}$ Australian population estimates are from the Australian Bureau of Statistics Australian Demographic Statistics for 30 June 2018 as published at September 2019. The population figures for other countries are based on OECD Stat data for 2018 as extracted at 24 October 2019 with the exception of the United Kingdom which quotes 2019 figures.
${ }^{4}$ Australian fatality rates per population are based calculated rates whilst International fatality rates are based on Department for Transport statistics, United Kingdom: RAS52001 International comparisons of road deaths or relevant National Statistical Reporting Authorities, excluding Canada which are data for 2018.
${ }^{18}$ Data for 2018.
${ }^{19}$ Data for 2019.

| TOTAL | 329 | (2.4\%) | 4,140 | (29.7\%) | 5,286 | (38.0\%) | 4,164 | (29.9\%) | 13,919 | (100.0\%) |

${ }^{1}$ Time periods A to J are as shown on the next page. In the case of a fatal crash reported with an unknown time, a time period is estimated.

The time periods on the previous page were defined by A.J. McLean, O.T. Holubowycz and B.L. Sandow in their report Alcohol and Crashes: Identification of Relevant Factors in this Association, Department of Transport, Australia, 1980. The ten time periods, A to J, exhibit different characteristics of traffic conditions, driver/rider behaviour and trip purpose.

For example time period I is from 9 pm on Sunday, Monday, Tuesday and Wednesday nights to 3 am the following mornings.

Figure 3a: Fatal crashes, road user movement
(Number in each cell indicates number of crashes with a first impact of that type)

|  | Degree of crash |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Vehicle type | Fatal crash |  | Serious injury crash |  | Moderate injury crash |  | Minor/Other injury crash |  | Total casualty crashes |  |
| Passenger vehicle ${ }^{2}$ | 270 | 0.6 | 4,168 | 9.3 | 6,636 | 14.8 | 5,873 | 13.1 | 16,947 | 37.7 |
| Rigid truck, van or utility | 114 | 1.3 | 1,143 | 13.1 | 1,616 | 18.5 | 1,176 | 13.4 | 4,049 | 46.3 |
| Articulated truck ${ }^{3}$ | 25 | 11.2 | 108 | 48.2 | 132 | 58.9 | 83 | 37.0 | 348 | 155.2 |
| Bus | 9 | 6.3 | 45 | 31.7 | 61 | 43.0 | 40 | 28.2 | 155 | 109.4 |
| Motorcycle | 70 | 2.9 | 1,040 | 43.0 | 710 | 29.3 | 424 | 17.5 | 2,244 | 92.7 |
| All motor vehicles on register ${ }^{4}$ | 492 | 0.9 | 6,603 | 11.7 | 9,318 | 16.5 | 7,747 | 13.7 | 24,160 | 42.8 |

 database, the involvement rates for the passenger vehicle and rigid truck, van or utility categories are not comparable with years prior to 2013
1 Rates (shown in italics) are expressed as the number of vehicles involved in crashes per 10,000 registered vehicles of that type using registration data as at 30 June 2019.
2 Comprised of sedan, station wagon, hatchback, taxi-cab, passenger van and four wheel drive passenger vehicle.
${ }^{3}$ Comprised of articulated tanker, semi-trailer, low loader, road train and B-double
4 Includes other and unknown motor vehicle types.

Table 17: Crashes, factors, degree of crash

| Factors possibly contributing to crash ${ }^{1}$ | Degree of crash |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Fatal crash | Serious injury crash | Moderate injury crash | Minor/Other injury crash | Total casualty crashes |
| Controller Disadvantaged ${ }^{2}$ |  |  |  |  |  |
| Chronic illness/physical infirmity | 1 | 1 | 5 | 1 | 8 |
| Sudden illness | 9 | 151 | 178 | 31 | 369 |
| Swerving to avoid animal | 3 | 75 | 88 | 31 | 197 |
| Distraction inside vehicle | 7 | 101 | 150 | 58 | 316 |
| Distraction outside vehicle | 33 | 384 | 387 | 168 | 972 |
| Equipment failure/fault |  |  |  |  |  |
| Brakes | 2 | 10 | 11 | 5 | 28 |
| Steering | 0 | 4 | 6 | 1 | 11 |
| Tyres | 3 | 21 | 35 | 10 | 69 |
| Wheel, axle/suspension | 0 | 3 | 3 | 1 | 7 |
| Lights | 0 | 2 | 0 | 0 | 2 |
| Towing/coupling | 1 | 1 | 1 | 1 | 4 |
| Insecure load | 2 | 4 | 5 | 1 | 12 |

 brakes failed would be counted once in each of the relevant categories.
${ }^{1}$ Data under-reported due to difficulty in collection.
${ }^{2}$ Motor vehicle controllers only.

Note: Assessment of alcohol involvement in a crash is based on the blood alcohol concentration (BAC) readings of the motor vehicle controllers involved in the crash as follows:
Yes $\quad$ at least one motor vehicle controller was over the legal limit.
No - (1) BAC levels for all motor vehicle controllers are known and were under the legal limit; or

- (2) no motor vehicle controllers were involved in the crash.

Unknown - at least one motor vehicle controller had unknown BAC and all known BAC levels were under the legal limit.
1 Time periods A to J are as defined on page 43 . In the case of a fatal crash reported with an unknown time, a time period is estimated.

Table 19: Crashes, degree of crash, alcohol involvement, urbanisation

1 The Sydney, Newcastle and Wollongong Metropolitan Areas are defined in the Definitions on pages 12 and 13.
2 Country areas comprise all other areas of NSW and are sub-divided by speed limits as follows:
Urban: Speed limit up to and including $80 \mathrm{~km} / \mathrm{h}$.
Non-urban: Speed limit over $80 \mathrm{~km} / \mathrm{h}$.
Unknown: Speed limit is unknown.

Table 20a: Crashes, alcohol involvement, degree of crash

${ }^{1}$ FC - Fatal crash SC - Serious injury crash MC - Moderate injury crash OC - Minor/Other injury crash
The identification of speeding and fatigue involvement cannot always be determined from police reports of road crashes. The Centre for Road Safety has therefore established criteria for determining if a crash is likely to have involved these factors. The criteria used for this purpose are shown on page 11.

Table 21a: Motor vehicle controllers involved, degree of crash, road user class, sex, age DEGREE OF CRASH: FATAL

| Road user class | Sex | Age (years) |  |  |  |  |  |  |  |  |  |  |  | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

The identification of speeding involvement cannot always be determined from police reports of road crashes. The Centre for Road Safety has therefore established criteria for determining if a crash is likely to have involved this factor. The criteria used for this purpose are shown on page 11.

[^5]:    ${ }^{1}$ As at 30 June 2019. Excludes tractors, trailers, caravans, trader plates, plant and equipment. Refer to Table 39
    ${ }^{2}$ As at 30 June 2019. Refer to note on Table 38.
    ${ }^{3}$ Estimated resident population for 30 June 2019 as published on 24 September 2020. Source - Australian Bureau of Statistics. Refer to Table 37.

[^6]:    

[^7]:    Notes
    ${ }^{1}$ Underlying Cause of Death Data supplied by Australian Bureau of Statistics. Deaths registered in NSW and cause of death based on ICD Codes - Deaths from all causes (A00 - Y99) and All accidental deaths (V01 - V99, W00 - X59).
    ${ }^{2}$ NSW Centre for Road Safety Crash data
    ${ }^{3}$ Includes deaths where age unknown

[^8]:    ${ }^{1} \mathrm{~K}$ - Killed S - Seriously injured M - Moderately injured O - Minor/Other injured TI - Total injured.
    Injury figures for 2005 to 2018 revised following matching with NSW Health data for 2005 to 2019.

[^9]:    ${ }^{1} \mathrm{~K}$ - Killed S - Seriously injured M - Moderately injured O - Minor/Other injured TI - Total injured.
    Injury figures for 2005 to 2018 revised following matching with NSW Health data for 2005 to 2019.

[^10]:    ${ }^{1}$ K - Killed S - Seriously injured M - Moderately injured O - Minor/Other injured TI - Total injured.
    Injury figures for 2005 to 2018 revised following matching with NSW Health data for 2005 to 2019.
    ${ }^{2}$ Includes pedal cycle passengers.

[^11]:    ${ }^{1} \mathrm{~K}$ - Killed S - Seriously injured M - Moderately injured O - Minor/Other injured TI - Total injured.
    Injury figures for 2005 to 2018 revised following matching with NSW Health data for 2005 to 2019.
    ${ }^{3}$ Includes unknowns, animal riders and occupants of vehicles such as animal drawn vehicles and trains.

[^12]:    1 FC - Fatal crash SC - Serious injury crash MC - Moderate injury crash OC - Minor/Other injury crash
    ${ }^{2}$ K - Killed S - Seriously injured M - Moderately injured O-Minor/Other injured

[^13]:    Note: Vehicles hitting pedestrians are not included in this table.

[^14]:    Note: Percentages of all crashes involving those traffic unit types are shown in brackets.
    ${ }_{1}$ Crash categories listed are those involving at least one traffic unit of that type.
     both 'Car crash' and 'Motorcycle crash' categories.

[^15]:    Note: Percentages of all crashes involving those traffic unit types are shown in brackets.
    ${ }_{1}$ Crash categories listed are those involving at least one traffic unit of that type.
     both 'Car crash' and 'Motorcycle crash' categories.

[^16]:    1 Unknown sex included.

[^17]:    ${ }^{1}$ FC - Fatal crash SC - Serious injury crash MC - Moderate injury crash OC - Minor/Other injury crash
    ${ }^{2}$ Includes persons driving whilst disqualified or suspended. 3 Includes P1 and P2 licence types 4 P2 licence type

[^18]:    1 Blood Alcohol Concentration.
    2 Unknown sex included.
    3 Learner and Provisional Licence holders.
    ${ }^{4}$ Learner and Provisional Licence holders, unlicensed controllers and certain categories of professional controllers.

[^19]:    IMPORTANT: The feature categories in this table are not mutually exclusive and must therefore not be added together. For example, a crash at roadworks on a bridge would be counted once in each of the relevant categories.

[^20]:    1 'Metropolitan' is comprised of the Sydney, Newcastle and Wollongong Metropolitan Areas.
    'Country' is comprised of all other areas of the State.

[^21]:    ${ }^{1}$ Includes cases of unknown alignment.

[^22]:    ${ }^{1}$ FC - Fatal crash SC - Serious injury crash MC - Moderate injury crash OC - Minor/Other injury crash.
    ${ }^{2} K$ - Killed S - Seriously injured M - Moderately injured O-Minor/Other injured.

[^23]:    ${ }^{1}$ FC - Fatal crash SC - Serious injury crash MC - Moderate injury crash OC - Minor/Other injury crash.

[^24]:    ${ }^{1}$ FC - Fatal crash SC - Serious injury crash MC - Moderate injury crash OC - Minor/Other injury crash.
    ${ }^{2} K$ - Killed S - Seriously injured M - Moderately injured O - Minor/Other injured.

[^25]:    ${ }^{1}$ FC - Fatal crash SC - Serious injury crash MC - Moderate injury crash OC - Minor/Other injury crash.
    ${ }^{2} K$ - Killed S - Seriously injured M - Moderately injured O-Minor/Other injured.

[^26]:    ${ }^{1}$ FC - Fatal crash SC - Serious injury crash MC - Moderate injury crash OC - Minor/Other injury crash.
    ${ }^{2} K$ - Killed S - Seriously injured M - Moderately injured O-Minor/Other injured.

[^27]:    ${ }^{1}$ FC - Fatal crash SC - Serious injury crash MC - Moderate injury crash OC - Minor/Other injury crash.
    ${ }^{2} \mathrm{~K}$ - Killed S - Seriously injured M - Moderately injured O - Minor/Other injured.

[^28]:    ${ }^{1}$ FC - Fatal crash SC - Serious injury crash MC - Moderate injury crash OC - Minor/Other injury crash.
    ${ }^{2} \mathrm{~K}$ - Killed S - Seriously injured M - Moderately injured O - Minor/Other injured.

[^29]:    ${ }^{1}$ FC - Fatal crash SC - Serious injury crash MC - Moderate injury crash OC - Minor/Other injury crash.
    ${ }^{2} \mathrm{~K}$ - Killed S - Seriously injured M - Moderately injured O - Minor/Other injured.

[^30]:    ${ }^{1}$ FC - Fatal crash SC - Serious injury crash MC - Moderate injury crash OC - Minor/Other injury crash.

[^31]:    ${ }^{1}$ FC - Fatal crash SC - Serious injury crash MC - Moderate injury crash OC - Minor/Other injury crash

[^32]:    ${ }^{1}$ FC - Fatal crash SC - Serious injury crash MC - Moderate injury crash OC - Minor/Other injury crash.
    ${ }^{2} \mathrm{~K}$ - Killed S - Seriously injured M - Moderately injured O - Minor/Other injured.

[^33]:    ${ }^{1}$ FC - Fatal crash SC - Serious injury crash MC - Moderate injury crash OC - Minor/Other injury crash
    ${ }^{2} \mathrm{~K}$ - Killed S - Seriously injured M - Moderately injured O - Minor/Other injured.

[^34]:    ${ }^{1}$ FC - Fatal crash SC - Serious injury crash MC - Moderate injury crash OC - Minor/Other injury crash
    ${ }^{2} \mathrm{~K}$ - Killed S - Seriously injured M - Moderately injured O-Minor/Other injured.

[^35]:    ${ }^{1}$ FC - Fatal crash SC - Serious injury crash MC - Moderate injury crash OC - Minor/Other injury crash.
    ${ }^{2} K$ - Killed S - Seriously injured $M$ - Moderately injured $O$ - Minor/Other injured.

[^36]:    ${ }^{1}$ FC - Fatal crash SC - Serious injury crash MC - Moderate injury crash OC - Minor/Other injury crash.
    ${ }^{2} K$ - Killed S - Seriously injured M - Moderately injured O-Minor/Other injured.

[^37]:    ${ }^{1}$ FC - Fatal crash SC - Serious injury crash MC - Moderate injury crash OC - Minor/Other injury crash.
    ${ }^{2} \mathrm{~K}$ - Killed S - Seriously injured M - Moderately injured O - Minor/Other injured.

[^38]:    ${ }^{1}$ FC - Fatal crash SC - Serious injury crash MC - Moderate injury crash OC - Minor/Other injury crash.
    ${ }^{2} \mathrm{~K}$ - Killed S - Seriously injured M - Moderately injured O - Minor/Other injured.

[^39]:    ${ }^{1}$ FC - Fatal crash SC - Serious injury crash MC - Moderate injury crash OC - Minor/Other injury crash.
    ${ }^{2}$ K - Killed S - Seriously injured M - Moderately injured O-Minor/Other injured.

[^40]:    ${ }^{1}$ FC - Fatal crash SC - Serious injury crash MC - Moderate injury crash OC - Minor/Other injury crash.
    ${ }^{2} \mathrm{~K}$ - Killed S - Seriously injured M - Moderately injured O - Minor/Other injured.

[^41]:    ${ }^{1}$ Unknown sex included.
    2 Includes unknowns, animal riders and occupants of vehicles such as animal drawn vehicles and trains.

[^42]:    ${ }^{1}$ Unknown sex included.
    2 Includes unknowns, animal riders and occupants of vehicles such as animal drawn vehicles and trains.

[^43]:    ${ }^{1}$ Unknown sex included.
    2 Includes unknowns, animal riders and occupants of vehicles such as animal drawn vehicles and trains.

[^44]:    ${ }^{1}$ Unknown sex included.
    2 Includes unknowns, animal riders and occupants of vehicles such as animal drawn vehicles and trains.

[^45]:    1 Blood Alcohol Concentration.
    2 Unknown sex included.
    ${ }^{3}$ Learner and Provisional Licence holders.
    4 Learner and Provisional Licence holders, unlicensed controllers and certain categories of professional controllers.

[^46]:    1 Learner and Provisional Licence holders.
    2 Learner and Provisional Licence holders, unlicensed controllers and certain categories of professional controllers.

[^47]:    1 Learner and Provisional Licence holders
    2 Learner and Provisional Licence holders, unlicensed controllers and certain categories of professional controllers.

[^48]:    The identification of speeding and fatigue involvement cannot always be determined from police reports of road crashes. The Centre for Road Safety has therefore established criteria for determining if a crash is likely to have involved these factors. The criteria used for this purpose are shown on page 11.
